**How are visitors getting to your site?
How are they using your site? Are
visitors converting into customers?
Which marketing efforts are paying off?
Urchin answers all of these questions
and many more**

What is Urchin?

Urchin 5, The Web Marketing Platform, is a web analytics software package designed to analyze traffic for one or more websites and provide highly accurate, useful, easy-to-understand reports on-demand.

Improve Your Site - Increase Revenue

How are visitors getting to your site? How are they using your site? Are visitors converting into customers? Which marketing efforts are paying off? Urchin answers all of these questions and many more with its detailed unique visitor reports. Urchin 5 sets the bar with the most advanced visitor tracking methods in the industry. Urchin's reports allow you to optimize your website and save money by increasing the effectiveness of your marketing dollars. And Urchin 5 is the only analytics product to use Adobe's SVG technology to display stunning charts and graphs that load instantly. Change your report's date range or use Urchin's report side filters to modify the information you are viewing and Urchin's graphics update in a blink - leaving competing products in the dust.

At iWay, Urchin 5 is included in hosting packages with value from **25 US\$/month**

Urchin Is Rated #1

Urchin is often declared superior to the competition, even software and services costing many times as much. Have a look at the latest review - "The clear winner here is Urchin 5" - Search Engine Professionals .

Urchin Is Smarter

Urchin is the most accurate web analytics products on the market. How? By using both log files and cookie information. Urchin captures visitor parameters and true path data via the Urchin Tracking Module (UTM2), a free, client-side data collection component that transparently sends additional data back to the server and into the log file. The UTM2 uses a first-party cookie to overcome the effects of caches, proxies, and IP-recycling to provide the most accurate and complete reporting available from ANY analytics solution.

Only Urchin gives you a complete picture of your websites' usage.

-  **Business Ready(sm) SVG-Powered Charts and Graphs**
Easily copy/paste any Urchin graph into PowerPoint, Word, etc. SVG vector-based graphics are interactive, super-fast to load, and re-render nearly instantly.
-  **Most Accurate**
The UTM2® "sees through" proxies and caches to deliver the most accurate visitor and path reporting, new Client Parameters reports, and much more with no security warnings or concerns.
-  **Fastest and Most Efficient**
Legendary performance and resource efficiency, automatic backups, fault tolerance/recovery, and more.
-  **User Authentication Built-in**
Easily manage user access levels, groups, and affiliations (sub admins). Users cannot see anything about others on the system.
-  **Multilingual**
Reports in multiple languages, including double-byte languages.
-  **Built-in Help**
Every screen of the Admin and Reporting GUIs includes pertinent help information.
-  **Easiest to Use**
100% browser-based administration and reporting, step-by-step configuration wizards, and more.
-  **Most Scalable**
Datacenter and cluster friendly, flexible data storage, battle-tested and hardened.
-  **Location Independent**
Manage Urchin and view reports from any web-connected computer (or lock it down completely, your choice).
-  **Automatic All-Profiles Report**
Easily compare traffic between all your sites and assess server load. Further, all individual users get aggregate reports for the Profile they have access to.
-  **Export Data**
Click a button to export any report to Excel, Word, or Tab formats.
-  **Built-in Database**
All reports generated on-the-fly as-requested - no waiting.

Help Information:

Sessions Graph
This report shows the trend of recent activity on your website in terms of Visitor Sessions over time. The default timeframe is one week, but this can easily be changed in the Date Range control area.

Calculation Methodology
A 'Session' is defined as a series of clicks on your site by an individual visitor during a specific period of time. A Session is initiated when the visitor arrives at your site, and it ends when the browser is closed or there is a period of inactivity. Sessions quantities will vary to some degree based on what type of visitor tracking method is employed. For the most accurate numbers, the Urchin Traffic Monitor (UTM) should be used.

Help Information:

Referrals
This report ranks referring URLs (external web pages) that brought traffic to your site. For Sessions without an external referral, which occurs when a Visitor goes directly to your site via a bookmark/favorite or by typing in the URL directly, the (no referral) entry is incremented. This allows you to compare the percentage of traffic from external links versus Visitors that already know about your site. Click any referring page to view it in a new browser window.

Calculation Methodology
Each session is scanned for an external referral, which is determined using the domains list in the configuration for this site. If an external referral is found, then the base-URL of the referral is entered and incremented. The base-URL does not include query parameters (after the ? query token) which would cause extreme granularity. If no external referral is detected then '(no referral)' is incremented.

Notes
To filter (include or exclude) on a certain item, enter its name or part of it, click the + or - button, and press the enter key. To graph any item over time, click the corresponding icon at the right side of the screen.

Help Information:

Pageviews Graph
This report shows the trend of recent activity on your website in terms of Pageviews over time. The default timeframe is one week, but this can easily be changed in the Date Range control area.

Calculation Methodology
A 'Pageview' is defined as a request from a visitor's browser for a displayable web page, generally an HTML file. Urchin's configuration controls which file extensions are treated as Pageviews. In general, images and other embedded content, such as style sheets and javascript, are not considered to be Pageviews.
